Professional Summary

B.Tech Computer Science Engineering (Cyber Security) student currently in 4th year, 7th semester, with hands-on knowledge of networking, cybersecurity fundamentals, system administration, and software development. Experienced in Cisco networking concepts, network troubleshooting, IoT projects, and secure application development. Seeking opportunities to apply technical skills in networking, cybersecurity, and IT infrastructure roles.

Technical Skills

Networking & Cisco: CCNA/CCNP Fundamentals, OSI Model, TCP/IP Model, Network Devices (NIC, Hub, Switch, Router), LAN/WAN, IPv4 Addressing, Subnetting, Binary Conversion, Network Topologies, Cisco Packet Tracer, GNS3, Router Configuration, Static Routing, Default Routing, Routing Table Concepts, VLANs, Trunk Ports, Inter-VLAN Routing Concepts, DHCP Configuration, DORA Process, ARP, ICMP, Telnet, SSH, Three-Way Handshake

Cybersecurity & Systems: Cybersecurity Fundamentals, Network Security Basics, Network Troubleshooting, Windows & Linux Administration

Programming & Development: C, C++, Kotlin, HTML, CSS, Python (Learning), Android Development

IoT & Hardware: ESP32, ESP8266, Embedded Systems, IoT Automation

Design: UI/UX Design (Figma, Canva), Graphic Design, Social Media Content Creation

Networking Training & Practical Knowledge

- Understanding Cisco certification path and networking fundamentals
- Studied OSI model layers, encapsulation, and application protocols including HTTP, DNS, DHCP, and FTP
- Practiced IP addressing, subnetting, class ranges, and network design concepts
- Configured routers, passwords, enable secret, and basic device management
- Implemented VLAN concepts, switch port assignment, trunk configuration, and inter-VLAN routing basics
- Configured DHCP services and performed network troubleshooting using DORA process analysis
- Worked with ARP, MAC-IP mapping, ICMP testing, and connectivity troubleshooting
- Designed and tested multi-router network topologies using Cisco Packet Tracer and GNS3
- Practiced static routing, default routes, loopback interfaces, and network redundancy concepts

Technical Projects

Password Manager (Kotlin): Developed a secure local credential management application with authentication and secure storage concepts.

ESP32 Display Simulator: Built a simulation environment for ESP32 display modules to test

layouts and interface logic.

IoT Automation System: Developed a home automation system using ESP32, relay modules, and IoT integration.

Mess Management System: Created a system for meal tracking, billing, and attendance management.

Offline Course Tracker: Developed a productivity application to track learning progress and study hours.

Network Simulation: Created and tested network topologies using Cisco Packet Tracer with router and switch configurations.

Professional Experience

Freelance Network & IT Support | 2022 – Present

- Assisted with basic network setup, router/switch configuration, and troubleshooting.
- Supported Wi-Fi, LAN connectivity, software, and hardware-related issues.

Social Media Designer Intern | Jarurat Care | 2024

- Designed social media content and promotional graphics.
- Collaborated on digital campaigns and branding materials.

Education

B.Tech in Computer Science & Engineering (Cyber Security)

4th Year | 7th Semester | Sambalpur University

Relevant Coursework: Computer Networks, Cybersecurity, Data Structures, Algorithms, Artificial Intelligence
